e2 green apple

1. Why is it confusing to think of NYC as an ecosystem? Why does it make sense?
2. Why is per capita a more accurate measure?
3. Why did the guy who moved into the country gain weight?
4. A wise person once said that the greatest cities are those built with walking in mind. How is this different in LA?
5. Why would a skyscraper be more efficient than a smaller building?
6. How did “environmental” become “smarter”?
7. How was 4 Times Square a prototype? What other prototype buildings do you know of?
8. Last week transparent PV panels were revealed. How would this change the frit concept?
9. “blast furnace slag” and fly ash are used for the concrete in the film. Why is fly ash banned in Europe?
10. Instead of using drinking water to flush toilets, they use what?
11. Why is a 5 year ROI basic business sense?
12. How is payback different in Europe and Japan?
13. What parts of the Living Building Challenge resonate with this video?
14. What would make you want to live in the Solaire, near Battery Park?
15. What are the blue things on the side of the building?
16. We are 4.6% of the global population, consuming how much of the world’s resources?
